

## Spencer Transportation System WOW, load capacity 150 kg

**Order number:** RD-02080

WOW is a comfortable transport solution for rescuers and patients. Thanks to the clever system with optionally insertable tube made of aluminum, the patient can also be transported sitting - ideal for the evacuation of bedridden patients from hospitals, nursing homes and retirement homes etc.

For the operator, WOW is a real relief in handling the patient in confined areas, e.g. stairways and thanks to the shoulder straps also back-friendly.

Additional straps and the footrest give the patient a secure feeling during transport.

The extremely resistant material is fireproof and non-absorbent, making it easy to clean and disinfect. WOW can also be rolled up and stowed away to save space.

- **integrated patient handles**

Here, the design focuses on the needs of the patient. The handles on the inside have been specially designed for the patient to convey a sense of security.

- **adjustable footrest**

The footrest can be adjusted twice, contributes to the stability and provides an additional sense of security.

- **adjustable straps**

The innovative, adjustable straps help to perform a correct and gentle to the musculature lifting movement. The load is optimally distributed on the shoulders.

The straps can be removed if they are not needed.

- **optional side guide**

A three-piece aluminum frame is stowed in a pocket on the back of the WOW, which can simply be inserted as a side guide if required. In this way, the flexibility of the stretcher can be reduced by 70%.

load capacity: 150 kg

total length with unfolded footrest: approx. 256 cm

width above: 96 cm

width down: 70 cm

pack size: 50 x 60 x 15 cm

number of carrying handles: 10

weight: approx. 4.7 kg
