

Rescue Seat, Kombi

Order number: RD-02170

Practical transport system for the rescue of injured persons where space is at a minimum i.e. tight stairways or narrow hallways. Ideal for when conventional transport systems like stretchers and wheelchairs cannot be used.

The seat, back and shoulder supports are manufactured using high tensile polyester and are intrinsically connected to each other.

Both the adjustable shoulder pads include extra structural padding to lighten the burden of the helpers. The shoulder belts are manufactured from white, highly tensile polyester band, 10 cm wide.

Shoulder support is adjustable (using a velcro closure) to take different body sizes into account.

material: high tensile polyester
width shoulder belts: 10 cm
weight: 0.7 kg
