

PAX Rescue-Boa

Order number: RD-02175

With the rescue-boa a quick and correct axial patient movement is possible e.g. on a supplied spine board. Opposite a crash rescue by rescue grip the patient's torso won't be bent forwards.

Better leverages minimize the helpers' physical stress compared to an absolutely manual method.

The PAX rescue-boa comes with storage bag. The detachable antibacterial blanket can be unwrapped from the antibacterial cover to keep patients warm.

supplied with:
transport bag

material: PES, highviz/bright yellow
length: 315 cm
dimensions, packed: 28 x 40 x 8 cm
weight: 0.9 kg
