

## rescue-tec Emergency Backpack L

**Order number:** RD-07840

The backpack has three outer side pockets and two front patch pockets. On the inside of the lid there is a large ampoule compartment with 5 rows of elastic straps of different sizes and two inside pockets 24 x 14 x 4.5 cm. On the outside of the ampoule compartment further rows are sewn on with elastic loops of different sizes.

The large main compartment offers space for four inner pockets 25 x 11 x 8 cm, which are fixed with Velcro. In addition, there is space for an oxygen cylinder, which is fastened with Velcro straps.

The attached, half-height front pocket has elastic loops of different sizes at the front and back to hold first aid material. The flat front pocket behind it offers space for important documents.

The backpack is made of high-quality Cordura fabric. The fabric is extremely tear-resistant and easy to clean. It has a water-, oil- and dirt-repellent impregnation and dispersion coating. YKK's two-way zippers allow the rucksack to be opened and closed easily and quickly. For better handling, especially when wearing gloves, all sliders are equipped with zipper extensions.

The padded back and the adjustable shoulder straps provide high wearing comfort. An adjustable chest strap and a padded lap strap also increase wearing comfort.

A fleece strip on the front allows individual identification by means of a reflective label (300 x 50 mm).

Included in delivery:

4 inside pockets 25 x 11 x 8 cm (red, green, blue, yellow)

2 inside pockets 24 x 14 x 4,5 cm (blue, red)
