

## Headset adapter set Ceotronics Flexcom, for H-Series

**Order number:** SA-01695

The Bullard H1500 and H3000 helmet models can be easily retrofitted with additional slots for headsets. The slot extension creates the necessary space. It is simply screwed onto the existing visor and chin strap attachment. An adapter can then be used to attach and remove headset sets quickly, easily and independently of the visor.

The slot extension and all adapter models are approved as accessories for Bullard helmets in accordance with EN443:2008.

The set consists of a slot extension with adapter for hearing/speaking sets and installation instructions. The existing visor and chin strap fastening screws can still be used.

- for Ceotronics Flexcom model
- Mounting on helmet right
