

## Katadyn Pocket Filter Black Edition, lifespan up to 50.000 l

**Order number:** SO-01150

The new Black Edition from the Katadyn Group provides the perfect foundation for all the challenges you face in the great outdoors. Efficient, durable and hard-wearing water treatment is especially important when you embark on extreme adventures. For decades, military and rescue services around the world have also relied on the Pocket.

The rugged Katadyn Pocket Black Edition is a ceramic depth filter against bacteria, protozoa and other pathogens. The pores of the filter ceramic (pore size: 0.2 micron = 0.0002 mm) are smaller than the microorganisms. Because of their size, these cannot pass through the filter element and are removed from the water.

The hundredfold proven Katadyn ceramic filter can be cleaned several times in contrast to disposable filters. At 1 liter/minute, the time saved with the silver-impregnated ceramic filter is also a major plus. The lifetime is up to 50.000L, depending on the water quality

- effective against microorganisms
- for small groups up to 3 persons
- suitable for heavily polluted water
- for frequent use
- 0,55 kg light and mobile, ideal for the backpack
