

SET Backpack Module building consultant

Order number: ST-01320

The rescue-tec backpack construction consultant facilitates the transport of the tools to the site. In the base, the most important tools can be found at hand in the backpack. It replaces boxes and suitcases, because these are not necessarily body- and joint-gentle to move. The backpack is the ideal solution to facilitate the transport of materials.

The lid compartment with a zipper can be used for storing an organizer (logbook). On the toolboard on the inside of the lid are three pockets of different sizes and elastic loops. In the pockets, measuring tape, laser distance meters and similar space can be found. The loops are used to hold the triangular scale, the wooden folding rule and the measuring wedge.
In conjanction with the organizer, the construction consultant has the most important tools at hand immediately after arriving at the application site.

The backpack is inside equipped with differently arranged Velcro strips, thus the backpack can be set up individually. The large and small inner pockets offer space for plaster powder, plaster cups and spatula, binoculars, compact camera,... . Due to the transparent top of the inner pockets the content is always in view. In addition, there is the possibility to mark the inner pockets with plug-in signs. Next to the inner pockets there is space for a bricklayer's trowel and marking spray. In addition, a tablet organizer can also be accommodated in the tub.

A telescopic measuring tool messfix can be attached to the outside of the backpack. On the opposite side there is a loop for clipping the HRT.

The inside unit made of ABS plastic gives necessary stability to the backpack and protects the contents. The backpack exterior features robust Cordura, and the interior is made of easy-to clean PVC-coated fabrics.

The sophisticated suspension system allows the carrying as a backpack, as well as use as a pocket. The shoulder straps are stowed in a compartment, so a comfartable accommodation in

a strandard compartment of the vehicle.

On the front side, a fleece strip is attached for a reflective shield (300 x 50 mm) which allows individual identification. (without contents)

material outside: Cordura, blau
material inside: pvc coated
dimensions: 56 x 37 x 21 cm
colume: 35 l
weight: 3.2 kg
