dimensions: 54 x 48 x 27cm

total weight: 4.3 kg

### **rescue-tec Emergency Backpack M**

The compact first-aid backpack has four outer pockets and one front pocket. A large inner pocket is sewn onto the inside of the lid. In the main compartment there is space for three removable inner pockets. The front pocket is equipped with elastic loops of different sizes to hold first aid material. The backpack is made of high-quality Cordura fabric. YKK's two-way zippers allow the rucksack to be opened and closed easily and quickly. For better handling, especially when wearing gloves, all sliders are equipped with zipper extensions.

The padded back and the adjustable shoulder straps provide high wearing comfort. An adjustable chest strap and a padded hip strap increase wearing comfort. The backpack can also be carried with a shoulder strap (included). A fleece strip on the front allows individual identification by means of a reflective label (300 x 50 mm).

Three inside pockets and the shoulder strap are included.

### **Filling according to DIN 14142**

SÖHNGEN sterile dressing materials bear the CE mark, the date of manufacture and a shelf life of 20 years from the date of manufacture. Thus sterile dressings can normally be consumed within the period of use. Time- and cost-intensive monitoring and replacement measures are no longer necessary.
