

rescue-tec Backpack for cut protection clothing, and the engine saw accessories, THW-Logo

Order number: TA-02387

For storing and transporting the cut-protection clothing and the engine saw accessories.

In the large main compartment, the backpack offers space for the forestry Bib trousers and jacket as well as helmet with visor and hearing protection. In the two inner pockets with Velcro there are small parts or an inner pocket small (not included). The four lateral openings ensure sufficient ventilation of the clothing.

On the inside of the lid, Velcro strips are sewn on for individual placement with the small and large inner pockets (TA-02430, TA-02435). For example, saw chains, felling wedges, combination socket tool and file set can be positioned in separate inner pockets on the inside of the lid.

The padded backpack carrying straps allow the backpack to be worn even for longer distances to the place of use. The shoulder straps are stowable in a slot compartment, thus ensuring comfortable accommodation in a standard compartment of the vehicle.

Individual marking with a reflective sign (380 x 80 mm) is possible on the front. (without inner pockets and contents)

material: Cordura 1000dtex
