

rescue-tec Inside Module Machine Accidents, for rescue-tec Machine Accidents Tool Kit

Order number: TA-02760

The module is designed for the rescue-tec tool and equipment backpack. The module is provided on the inside with Velcro strips and can be equipped with separate modules. So it is possible to set it up individually with different tools or equipment.

The most important tools for the rescue in machines accidents are at a glance. By dividing them into different compartments, the tools and equipment can be quickly surveyed and easy removed.

In addition to the tool set, a fine boring grinder with accessories and a cordless angle grinder can be fixed in special compartments.

Due to the transparent compartments system all equipment inside is visible. Also Labeling by insert card is possible. All bags and compartments can be opened with gloves. (without equipment and without backpack)

supplied with:

Tool board 51.5 x 33.5 cm for inside the cover, with pockets and straps

Tool board 49.5 x 31.5 cm, with pockets and straps, with carrying handles

4 inside pockets of different sizes
