Order number: TH-01065

With these sandbags you are ready for the flood season!

- excellent long-term storage capacity gives planning security
- with binding band for immediate use

dimensions: 40 x 60 cm

material: polypropylene

Sandbags are indispensable helpers when it comes to flood protection. Fill the bags about 2/3 full with normal fine sand of grain size 0-4 to achieve a weight of about 12-14 kg per bag. For one square meter of area, you usually need 8 to 10 sandbags filled accordingly. The sandbags are made of polypropylene and can therefore be stored for a long time. Whether in case of flooding or other water hazards, with sandbags you have an effective means to protect yourself and your property. Trust in the strength and reliability of these indispensable helpers in crisis situations.
