

Glas-Master

Order number: TH-02110

The Glas-Master is a manual glass-cutting tool for cutting out windows extremely quickly.

Windows can be cut out in seconds without using electrical or hydraulic equipment. Unlike various copies, only the original Glas-Master has the saw blade with the special tooth geometry and is ready for use immediately.

The automatic spring centre punch is kept in the rubber-coated handle of the Glas-Master, with which side and rear windows can be opened. In order to use the punch, it is turned round and placed on the window. When a certain amount of pressure is applied, the punch is activated and shatters the safety glass.

- sturdy, varnished tubular steel body
- replaceable special saw blade
- hand guard
- non-slip, soft rubber handle for front hand
- two screw-on wall and vehicle brackets
- made in USA

length: 42.5 cm

weight: 1.2 kg
