

## Spiral Opener for Double Offset Doors, 4 pieces set

**Order number:** TH-03020

The use is very simple: The tool is inserted in the narrow gap between door and frame by turning until it makes contact with the latch. Continued turning pushes back the latch. Usually this process does not cause any damages except a pierced sealing strip.

The set consists of four different tools for doors with the lock mounted either on the right or on the left and 2 different material strengths (1.5 and 1.7 mm) for the different types of offset door designs. Of course, the tools are very well suited for opening simple offset doors as well!
