

## LED Floodlight, 60 W, 6.000 lm

**Order number:** TH-04231

The LED light source of this spotlight has an average service life of over 8.000 operating hours and is insensitive to vibrations. It can also be operated on small power generators without any problems. The large beam angle of approx. 150° enables good surface illumination with very good color rendering. Thanks to the generously proportioned heat sink, the spotlights only heat up slightly even during long periods of use, which has a positive effect on the light emission of the LED. After use, the lamps can be used again immediately without cooling down. The receiving sleeve according to DIN 14640 allows universal mounting on all standard spigots.

- high quality housing with powerful heat sink
- hand lever for locking the angle of inclination
- mounting sleeve for standard pins made of aluminum
- connection cable with pressure water tight plug IP68

light source: LED

power: 60 W

luminous flux: 6.000 lm

light color: 6.500 K

beam angle: 150°

length of connection cable: 10 m
