

rössle MULTI-PUSHER, Nylon, 50 cm wide, GRP telescope handle

Order number: TH-05017

Simply push dirt, liquids and co. away!

When dirt and liquids have to be removed during operations and shovel and broom do not bring the desired result, the universally applicable universal squeegee shows its power.

The removal of water, foam, oil binding agents and other contaminants is made immensely easier by the universal squeegee on any surface. Excellent results are achieved even on irregular surfaces, as the flexible sliding surface adapts to the floor and does not tilt. In addition, the universal squeegee with its break-proof GRP rod offers considerable advantages over conventional products made of wood or aluminium.

The universal squeegee is the perfect complement to our FD vacuum cleaners.

- for the removal of a wide variety of soiling in solid and liquid form.
- high chemical resistance of the thrust elements
- due to the protective shield shape of the thrust surface, liquids are directed in the pushing direction
- quick and easy two-way use due to two different thrust surfaces: blue plastic lip and white nylon broom
- the length of the telescopic rod is easily and quickly adaptable by means of the quick-release fastener

material: plastic, GRP, aluminium and nylon

dimensions: 50 cm wide thrust surface
