

Charger for 1 ADALIT Lamp, 240 V, for L-3000/L-3000 Power

Order number: TL-03055

All recharging devices for the ADALIT are designed with electronics that protect the torch against overloading. After plugging the ADALIT into the charging bay, the condition of the individual components and the battery charge status are checked. Four alternately lighting LEDs signal the readiness of the torch. The charging starts automatically. Should the torch still be switched on, the switch is bridged. After taking the charged torch out of the charging bay, the digital display starts to blink to tell the user that the switch is in the "ON" position.

When the batteries are 100 % charged, the charging current automatically cuts off to avoid overcharging. It also switches automatically to "sustaining" voltage.

Charger suitable for L-2000, L-3000 and L-3000 Power.

dimensions: 7.5 x 6 x 10 cm
number of loading berths: 1
voltage: 230 V
weight: 350 g
