

Replacement Cutting Edge for Rescue Knife S-CUT, four-pack

Order number: TO-02057

The replacement kit contains four blades and hygiene supports. Make sure you have a sharp cutting edge ready every time you will take care of a new patient. After using the cutting blade might have been blunt and we recommend to rotate the blade for optimal function. Once the blade has been rotated in a full circle and used all the six edges it is worn out and must be changed.

supplied with:
4 cutting blades
4 hygiene supports

material: stainless steel
