

Pulaski Axe with Hickory Handle

Order number: TO-03361

The Pulaski ax is primarily used for bush and forest fires. The cutting edge is for cutting off low-hanging branches (fire bridges), small trees and bushes, cutting roots into wound strips, the hoe is for exposing a wound strip on all types of soil.

- precisely ground ax blade made of hardened steel
- Steep hickory wood with good shock absorption
- ergonomically shaped handle

Length: 91 cm

The ax blade is made of hardened steel and is precisely ground to ensure long-lasting sharpness. The hickory wood handle, known for its shock absorption capabilities and strength, ensures comfortable handling and minimizes fatigue. The handle is ergonomically shaped and offers a comfortable hand position, which makes working efficient and less stressful. The right balance between head and handle allows for precise control and precise cuts. Both the ax blade and hickory handle have been carefully selected and crafted to ensure years of durability.
