

Vallfirest Fire Beater VF Alaska, with elastic telescopic handle 200 cm

Order number: TO-03397

The head of the innovative Alaska consists of five horizontal and six vertical blades, which can rotate around the central axis for better adaptation to the terrain. The head can be locked at a 45° angle, which optimizes the impact on the floor and uses the energy applied more efficiently. The horizontal leaves suffocate the fire, the vertically attached leaves can also be used for scraping, e.g. to expose embers.

The upper part of the telescopic handle is made of stable and light aluminum, the lower part of a flexible special plastic. The flexible part protects the user from kicking back when hitting the ground and, in addition, the whip effect can significantly increase the effectiveness when swinging back.

With the practical shoulder strap, the Alaska can be easily carried around.

- telescopic aluminum handle
- infinitely extendable
- small size because collapsible
- more efficiency through "whip effect"

supplied with:
shoulder strap

material: aluminum, plastic
retracted length: 92 cm
extended length: 200 cm
sheet size: 30 x 21 cm
weight: 1.78 kg
